COMMUNITY APPROPRIATE SUSTAINABLE ENERGY SECURITY

## CASES Webinar Series:

Energy strategies... Building codes...  
Integrated Resource Management Plans...

Critical Minerals Policies??

October 18th 2023 12-1pm CST

The electrification of energy systems across Canada necessitate significant changes to how we approach energy. Massive investments are required to develop low carbon, sustainable supplies; modernize the grid; support reconciliation and Indigenous sovereignty; and, ensures no one is left behind. Importantly, the nature of the changes varies across the country, given the regional nature of energy systems.

This presentation contemplates the multi-faceted, but siloed, highly-centralized approach underway in Manitoba. The existing systems is, arguably, one of the least carbon-intensive in Canada. However, projected demand-side trajectories require significant investments. The suite of policies introduced in the first eight months of 2023 are siloed, deficient in public input, and lack the innovation required to meet the social and political goals identified above. Now that the provincial election is over, we have an opportunity to reconsider our approach.
